

Survey of mines-related activities began by the then Ministry of Industries and Mines in 1333. Related statistics were published annually in the attachment of the publication "Statistics on Manufacturing Activities" until 1339, but they have appeared in a separate publication ever since under the title of "Statistics on Mineral Activities of Iran". The first census of mines of the country was carried out in Azar 1342 by the Ministry of Economy. Statistical Bureau of the Ministry of Economy gathered and published statistics on mines-related activities annually from 1342 to 1353, using statistics from nationwide mines registers and records. The second census of authorized mines of the country was conducted by the cooperation of the SCI and the Ministry of Industries and Mines in 1353. The SCI conducted a survey of a selected number of mines annually from 1353 to 1357. This economic sector suffered from a lack of statistics during the years 1357 to 1363, because in the interim no statistical surveys were implemented nor comprehensive registers were available. The SCI conducted a survey of mines covered by the public sector in 1364 and 1365, and also carried out the third census of mines of the country in 1366. Survey of mines has been conducted every year from 1367 to 1385 except for 1370 and 1384.

The data presented in this chapter are from the aforementioned censuses and surveys as well as data from the mines sector cooperatives reported by the Ministry of Cooperatives.

It should be noted that, (1) in the survey of the operating mines of the country, statistics on oil and gas, radioactive materials, and clay were not collected. However, due to the special importance of oil and gas statistics, the related information is presented in chapter 6. (2) in the

survey of operating mines, sand and gravel mines are enumerated by a sample survey, and other mines by a census. (3) the ISIC Rev.3 is followed with appropriate modifications for the classification of activities in this sector.

Definitions and concepts

Mine: collection of (cost-effective) mineral deposits, machinery, and facilities established for exploration, equipment, exploitation, and dressing of minerals. Dressing refers to all physical and chemical operations for separating some of waste materials from ores or separating ores from one another.

Operating mine: any mine with exploitation license from the Ministry of Industries and Mines (for mines other than sand and gravel) or from municipalities and governors offices (for sand and gravel) that has been under extraction (in some cases with dressing activities) for at least 30 successive or non successive days to produce marketable ores during the year of the enumeration

Private management: management exercised by individuals or private institutions.

Public management: management exercised by the ministries, government organizations, Islamic Revolution Foundations, banks, municipalities and other public institutions.

Workers: all the individuals working full-time or part-time in mine-related activities inside or outside of the mine. The employed persons are divided into two groups the production line workers (skilled and unskilled) and other workers (administrative, financial and service) according to their duties.

Production line skilled workers: employed persons capable of performing a part of technical activities related to production line due to their know-how and experience. Engineers, technicians, craftsmen, foremen, skilled

labourers, fitters, and drivers, are some examples.

Production line unskilled workers: persons working in production line whose jobs do not require any specific training or experience; such as labourers and porters.

Other workers (administrative, financial and service): employed persons engaged in clerical, administrative, financial and service activities in mines or their central offices but not engaged directly in extraction and production activities.

In presentation of statistics on employed persons, it is noteworthy that the method of "average number of employed persons" has been employed in the calculation.

Compensation of employees: see Chapter 4, Definitions and concepts.

Mineral production: all minerals obtained from a series of extraction activities which make them marketable. It should be mentioned that in some mining activities, minerals are supplied to the market without undergoing dressing process, whereas in others, minerals are supplied to the market after a series of physical and/or chemical treatments for separating some of the waste from ores, separating ores from one another, or increasing fineness of raw material. In addition, in one industry, several minerals may be produced. For example, copper ore mining activity includes minerals of copper ore and copper and molybdenum concentrates production.

Value of products: value of extracted ores and value of saleable mineral waste products at producer's prices; that is, the price of sale to customers at the mine.

Capital formation (changes in the value of capital goods): see Chapter 4, Definitions and concepts.

Value added: value of receipts (outputs) less the value of payments (inputs).

Value of receipts (outputs): value of mineral products, value of saleable mineral waste

products, manufacture and major repairs of capital goods by mine workers and other receipts of the mine including receipts from contracts, minor repairs of buildings and office equipment, minor repairs of machinery, laboratory, etc.

Value of payments (inputs): value of purchased materials and non-durable tools and instruments, fuel consumed, water and electricity, and other payments including payments on contracts, minor repairs of building and office equipment, minor repairs of machinery, laboratory, etc.

Cooperative: see Chapter 4, Definitions and concepts.

Mines cooperative: a cooperative company engaged in excavation, exploitation, and sales of minerals obtained from operating mines

Selected information

On the basis of the results of the survey of operating mines of the country in 1387, there were 4116 operating mines. The results show that a total of 75458 persons were working in these mines and the number of workers increased by 13.9 percent in contrast to the year 1386.

In the same year, the value of mines products amounted to 35568 billion rials. Iron ore, copper ore and decorative stone mines and quarries with 12942, 8639 and 3848 bln rials had the highest annual production value respectively.

In 1387, the value added of the nation's operating mine amounted to 27754 bln rials. Iron ore, copper ore and decorative stones with 9155, 7659 and 3338 bln rials had the highest value added respectively. These three accounted for about 73% of the sector's total value added.

Moreover, Kerman, Yazd and Fars with 10977, 6295 and 1662 bln rials had the highest value added among the provinces of the country.

In the year 1387, out of the total 3302 bln rials of fresh investments, over 70% relates to machinery, durable tools and administrative equipment and 8% goes to the development and discovery.

Mining of boron	38	2235	2312		- 2841	3328	3180	⊖
Mining of orpiment	313	144	879		- 0	180	560	⁽⁶⁾ 116851

5.4. VALUE OF MINERALS PRODUCTION IN OPERATING MINES BY TYPE OF ACTIVITY (mln rials)

Activity	1370	1375	1380	1383	1384	1385	1386	1387
Mining of alum	x	x	144	-	0	0	0	x
Mining of phosphate	x	600	39484	-	114766	31018	25153	x
Mining of salt	3220	26390	38076	-	69571	109273	159849	134040
Mining of silica	2059	18314	49152	-	87355	148891	189067	177793
Mining of ores slag	970	3672	10147	-	22468	24926	37928	70668
Mining of feldspar	393	3158	9474	-	19248	32814	35761	36936
Mining of talcum	222	1635	11491	-	5304	6959	8671	6639
Mining of asbestos	685	1978	3450	-	2990	0	0	x
Mining of shell	654	3415	7674	-	17340	12786	18570	⁽⁷⁾ 21049
Mining of mica	89	1294	4293	-	1752	4405	5152	∅
Mining of turquoise	80	325	954	-	4756	7625	10000	∅
Mining of opal	x	x	x	-	32	78	0	∅
Other precious and semi-precious stones.....	x	x	x	x	x	x	470	⁽⁸⁾ 12200

1. Value of production of gold ore for 1370 is included with copper ore.

2. Including antimony and titanium production value.

3. Value of production of ballast for 1370 is included with rubble stone.

4. Including production value of limonite and ferrou oxide.

5. Including production value of boron.

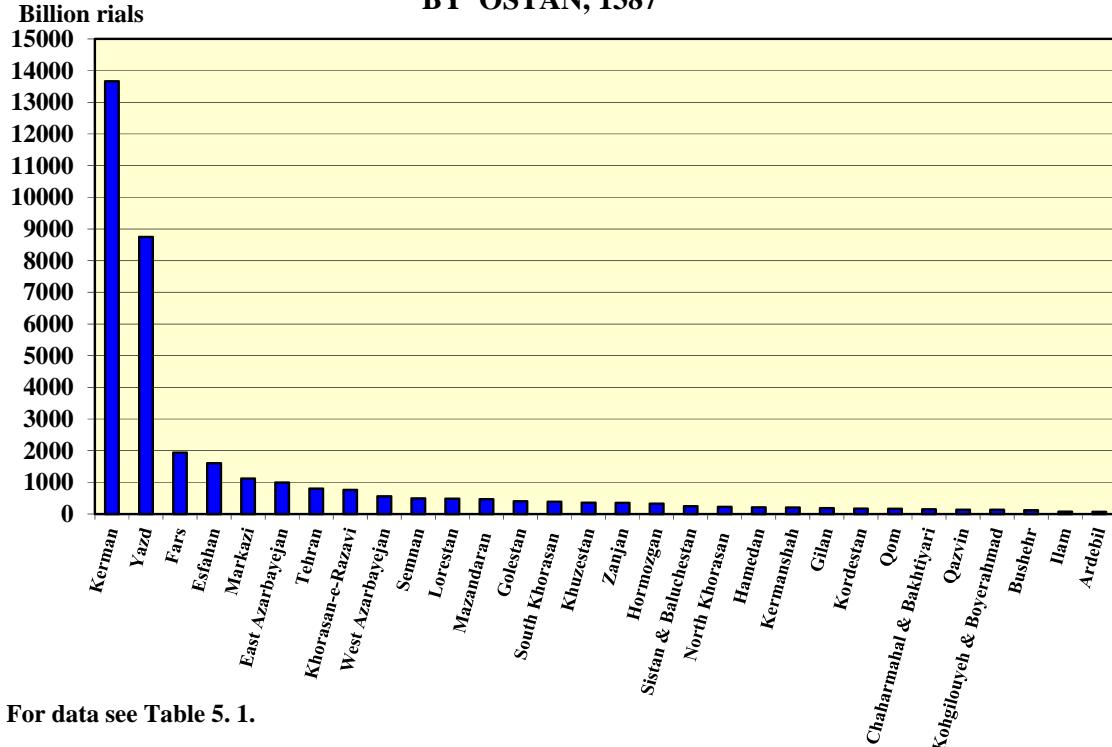

6. Including production value of phosphate and iodin.

7. Including production value of mica.

8. Including production value of opal and turquoise.
