

# Price Indices

20

### ***Introduction***

**B**elow you will find a short history of examination of prices and calculation of the related indices for urban and rural areas by both the Central Bank of the Islamic Republic of Iran and the SCI.

#### ***A. Consumer price index for urban consumers, producer price index, wholesale price index for goods and price index for goods exported***

The National Bank of Iran first calculated the cost of living index<sup>1</sup> in urban areas and wholesale price index for goods in 1315.

In 1338, the calculation of the cost of living index and wholesale price index for goods was revised due to change of the base year. By establishment of the Central Bank of Iran in 1339, the responsibility for calculating such indices was shifted to this Bank. With respect to remarkable changes in households' consumption patterns and expenditure composition, the Central Bank of Iran took the year 1348 as the base and made the second revision in the calculation of cost of living index and wholesale price index for goods. The year 1353 witnessed some changes in national economic conditions, which caused it to be

selected as the new base year, and the indices calculation underwent the third revision.

Considering the changes happened in the household consumption pattern in the years after the 1357 Islamic Revolution, the year 1361 was adopted as the base and the indices calculation was revised again.

In 1369 after the end of the Iran-Iraq War, which caused changes in economic conditions, revision in the base year was considered necessary and the Central Bank of Iran adopted the year 1369 as the new base for the calculation.

In the year 1378 the Central Bank of Iran changed the base year from 1369 to 1376 for calculation of price index of consumption goods and services in urban areas.

Central Bank of the Islamic Republic of Iran started calculation of the producer price index in 1369. From among uses of the index are its application for early revealing of inflation and adjusting current prices to constant in national accounts. The related publications appear quarterly and annually.

Calculation of the price index for commodities exported started in 1376 in order to show changes in prices of exported goods. Figures

relating to price index for exported and imported goods in the previous years were based on information obtained from the wholesalers involved in exports and imports. But, from 1382 on, statistics on exported goods, included in this chapter, is the very information obtained from the Customs, which covers all exported items.

It should be said that since 1387 the information of Wholesale price index for goods is not produced in Iran; therefore, the related tables (20-9 and 20-10 in previous yearbooks) have been deleted from the yearbook.

**B. Consumer price index for rural households**  
 The SCI conducted the retail price survey of certain consumer goods and services in rural areas for the first time in 1353. The results of the survey used to be published in the form of average prices of consumer goods and services in rural areas as quarterly and annual reports until mid-1357. The results of the survey for the second half of 1358 and the first half of 1359 were released as average prices and consumer price indices for rural consumers. Consumer price indices for goods and services in rural areas were calculated and released from 1361 to 1375 with the year 1361 as the base.

Moreover, the year 1374 was adopted as the base year in 1376, and the statistics for the years 1375 to 1383 were prepared and disseminated by Ostans and total country. At present, according to the latest revisions, the year 1381 has been adopted as the base for calculation.

### ***Definitions and concepts***

**Consumer price index (CPI):** is a measure of changes over the base year in prices of a certain fixed number of goods and services consumed by households.

**Classification of groups for goods and services:** goods and services subject to indices are classified according to their intrinsic nature and international classifications as well as national requirements. However, the overall bases of classifications are those recommended by the United Nations (i.e, the SNA<sup>2</sup> for consumer index for goods and services, the SITC<sup>3</sup> for wholesale trade, and ISIC<sup>4</sup> Rev. 3 for producer) and modified with respect to the economy considerations of Iran.

In these classifications, goods and services are divided into a number of large groups, each of which consists of several sub-groups. Moreover, groups of goods and services are also classified according to special groups in terms of requirements.

**Base year:** is a certain fixed year against which percentage of changes of indices are compared. The index for the base year is equal to 100.

**Weight:** contribution of any single good or service to the set of goods and services subject to indices is called "weight". In consumer price indexes for goods and services, contribution of any single good or service equals to a proportion of expenditure spent by a household to the total household expenditure. In wholesale price index, contribution of any single good is equal to

selling value of wholesale of goods to the total value of wholesale of goods. In producer price index, contribution of any single good or service is equal to proportion of the production value or selling value of a single good/service to the production or selling value of the set of goods and services.

**Urban areas:** see Chapter 2, Definitions and concepts.

**Rural areas:** see Chapter 2, Definitions and concepts.

**Producer price index (PPI):** shows the trend of changes in prices paid by producers in different economic sectors such as agriculture, fishing, manufacturing, mining and services. Producer price refers to the price which the purchaser pays to the producer for purchasing each commodity; it also represents the selling price of goods or services produced and supplied to wholesalers, domestic retail sellers and other industries and/or exported to foreign countries.

**Wholesale price index for goods:** is a measure of changes in wholesale prices of goods over the base year.

**Price index for exported commodities:** measures changes in goods prices exported. Exported commodities include all commodities which are completely produced inside the country or exported as semi-finished goods or raw material.

### ***Selected information***

Consumer price indices for goods and services in urban areas with an increase of 12.4 percent in 1389, compared with the previous year, reached 228.2 (base year = 1383). Compared with the changes in the index of the last year, this index got a increase of 1.6%. Consumer price indices increased by 14%, 10.6% , and 7.3% for three special groups, "goods", "services" and "housing, fuel and light" in 1389 respectively, compared with those of 1388. In the group for "food, beverages", the price indices for "oils and fats" by increase of 32.9% had the highest change while "Salt, spices, sauces, condiments and food products" with a -3.4% decrease experienced the lowest one, compared with those for 1388.

In 1389, the highest and lowest general index was for the provinces of Hamedan and Busher namely 241 and 205 respectively.

Consumer price indices for goods and services in rural areas in 1389 increased by 20 percent, as compared to corresponding period of previous year, and reached 321.8 (base year=1381). Consumer price indices of rural households for goods and services for two special groups "goods" and "services", as compared to corresponding period of the year 1388, increased by 23 and 10.7 percent, respectively. In group "food, beverages, and tobacco", the highest and the lowest increase relate to the group, "vegetables, pulses and vegetable products" and "dairy products and eggs" with 44.4% and 6.1 % increase respectively.

In group "non-food and services", the highest increase relates to the group " water, electricity, gas and other fuels " with an increase of 48.2% and the lowest increase belongs to the group "communications" with no change.

National producer price index for 1389, compared with that of the year 1388, increased 16.6 percent and reached 211.2 (base year= 1383). Compared with the changes of the last year, this index had an increase of 9.2 in 1389. Producer price index in "manufacturing products" with an increase of 22% compared to the previous year, has the highest increase and also in "transport, storage and communications" with a increase of 7.1% compared with the previous year, has the lowest change.

Price index for exported goods for 1389, as compared to the year 1388, increased 11 percent and reached 205.5 (base year= 1383).

In this sector, the highest increase, as compared to the previous year, relates to the groups "leather, articles of leather " namely 53.5% increase and the greatest decrease was for and "vegetable products", that is, a 13.6% drop respectively.
