

Introduction

Below you will find a short history of examination of prices and calculation of the related indices for urban and rural areas by both the Central Bank of the Islamic Republic of Iran and the SCI.

A. Consumer price index for urban consumers, producer price index, wholesale price index for goods and price index for goods exported

The National Bank of Iran first calculated the cost of living index¹ in urban areas and wholesale price index for goods in the year 1315.

In the year 1338, the calculation of the cost of living index and wholesale price index for goods was revised due to change of the base year. By establishment of the Central Bank of Iran in the year 1339, the responsibility for calculating such indices was shifted to this Bank. With respect to remarkable changes in households' consumption patterns and expenditure composition, the Central Bank of Iran took the year 1348 as the base and made the second revision in the calculation of cost of living index and wholesale price index for goods. The year 1353 witnessed some changes in national economic conditions, which caused it to be selected as the new base year, and the indices calculation underwent the third revision.

Considering the changes happened in the household consumption pattern in the years after the 1357 Islamic Revolution, the year 1361 was adopted as the base and the indices calculation was revised again.

In the year 1369 after the end of the Iran-Iraq War, which caused changes in economic conditions, revision in the base year was considered necessary and the Central Bank of

Iran adopted the year 1369 as the new base for the calculation.

In the year 1378 the Central Bank of Iran changed the base year from the year 1369 to the year 1376 for calculation of price index of consumption goods and services in urban areas. Moreover, since the year 1385, this index was calculated and disseminated on the basis of the base year 1383. It should be mentioned that the Statistical Centre of Iran started to calculate this index from the year 1381 and it was decided that from the year 1390, the information on this index be calculated according to the base year.

Central Bank of the Islamic Republic of Iran started calculation of the producer price index in the year 1369. The most important uses of the index are early revealing of inflation trend and its application in national accounts for adjusting current prices.

The related publications appear quarterly and annually.

Calculation of "the price index for exported commodities" started in the year 1376 in order to show changes in prices of exported goods. Figures relating to price index for exported and imported goods in the previous years were based on information obtained from the wholesalers involved in exports and imports. But, from the year 1382 on, statistics on exported goods, included in this chapter, is the very information obtained from the Customs, which covers all exported items.

It should be said that since the year 1387 the information of Wholesale price index for goods is not produced in Iran; therefore, the related

tables (20-9 and 20-10 in 1388 yearbooks) have been deleted from the yearbook.

B. Consumer price index for rural households

The SCI conducted the retail price survey of certain consumer goods and services in rural areas for the first time in the year 1353. The results of the survey used to be published in the form of average prices of consumer goods and services in rural areas as quarterly and annual reports until mid-1357. The results of the survey for the second half of 1358 and the first half of the year 1359 were released as average prices and consumer price indices for rural consumers. Consumer price indices for goods and services in rural areas were calculated and released from the year 1361 to the year 1375 with the year 1361 as the base.

Moreover, the year 1374 was adopted as the base year in the year 1376, and the statistics for the years 1375 to 1383 were prepared and disseminated by Ostans and total country. At present, according to the latest revisions, the year 1381 has been adopted as the base for calculation.

Definitions and concepts

Consumer price index (CPI): is a measure of changes over the base year in prices of a certain fixed number of goods and services consumed by households.

Classification of groups for goods and services: goods and services subject to indices are classified according to their intrinsic nature and international classifications as well as national requirements. However, the overall bases of classifications are those recommended by the United Nations (i.e, the SNA² for consumer index for goods and services, the SITC³ for wholesale trade, and ISIC⁴ Rev. 3 for producer) and modified with respect to the economy considerations of Iran.

In these classifications, goods and services are divided into a number of large groups, each of which consists of several sub-groups. Moreover, groups of goods and services are also classified according to special groups in terms of requirements.

Base year: is a certain fixed year against which percentage of changes of indices are compared. The index for the base year is equal to 100.

Weight: contribution of any single good or service to the set of goods and services subject to indices is called "weight". In consumer price indexes for goods and services, contribution of any single good or service equals to a proportion of expenditure spent by a household to the total household expenditure. In wholesale price index, contribution of any single good is equal to selling value of wholesale of goods to the total value of wholesale of goods. In producer price index, contribution of any single good or service is equal to proportion of the production value or selling value of a single good/service to the production or selling value of the set of goods and services.

Urban areas: see Chapter 2, Definitions and concepts.

Rural areas: see Chapter 2, Definitions and concepts.

Producer price index (PPI): shows the trend of changes in prices paid by producers in different economic sectors such as agriculture, fishing, manufacturing, mining and services. Producer price refers to the price which the purchaser pays to the producer for purchasing each commodity; it also represents the selling price of goods or services produced and supplied to wholesalers, domestic retail sellers and other industries and/or exported to foreign countries.

Price index for exported commodities: measures changes in goods prices exported. Exported commodities include all commodities which are completely produced inside the country or exported as semi-finished goods or raw material.

Selected information

Consumer price indices for goods and services in urban areas with an increase of 26.4 percent in the year 1390, compared with the previous year, reached 385.9 (base year = 1381). Compared with the changes in the index

of the last year, this index experienced an increase of 12.5%. Consumer price indices increased by 39.8% and 12% for two special groups, "goods" and "services" in the year 1390 respectively, compared with the year 1389. In the group for "food, beverages, and tobacco" the price indices for bread and cereal by an increase of 55.2% had the highest change while the price indices for tobacco with a 10.3% increase had

the lowest change. In the group of non-foods and services, this index for "Water, electricity, gas and other fuels" with a 234.9 % increase had the highest change and in the "communication" group with a 3.7% increase had the lowest change. In the year 1390, the highest and lowest general index was for the Ostans of Chaharmahal & Bakhtiyari and Khorasan-e-Razavi namely 525.9 and 336.1 respectively.

Consumer price indices for goods and services in rural areas in the year 1390 increased by 36.5 percent, compared to previous year, and reached 439.2 (base year=1381). Consumer price indices of rural households for goods and services for two special groups "goods" and "services" compared to the year 1389 increased by 43.4 and 13.2 percent, respectively. In group "food, beverages, and tobacco", the highest and the lowest increase relate to the group, "bread and cereal" and "tobacco" with 120.1% and 10.5 % increase respectively.

In group "non-food and services", the highest increase relates to the group "water, electricity, gas and other fuels" with an increase of 118.6% and

the lowest increase belongs to the group "communications" with a 2 percent increase. National producer price index for the year 1390, compared with the year 1389 increased by 34.2 percent and reached 283.5 (base year= 1383). Compared with the changes of the last year, this index had an increase of 17.6 in the year 1390. Producer price index in "manufacturing products" with an increase of 54.3% compared to the previous year, has the highest increase and also in "transport, storage and communications" with an increase of 12.3% compared with the previous year, has the lowest change.

Price index for exported goods in the year 1390, compared to the year 1389 increased 14.2 percent and reached 234.7 (base year= 1383).

In this sector, the highest increase compared to the previous year, relates to the groups "leather, articles of leather" with a 49% rise and the greatest decrease was for "vegetable products", with a 0.5 % increase respectively.

1. *Consumer price index*

2. *System of National Accounts, SNA*

3. *Standard International Trade Classification, SITC*

4. *International Standard Industrial Classification of all Economic Activities, ISIC*
