

S

Introduction

Survey of mines-related activities and continuous dissemination of its results began by the then Ministry of Industry, Mine and Trade in the year 1333. Related statistics were published annually in the attachment of the publication "Statistics on Manufacturing Activities" until the year 1339, but they have appeared in a separate publication ever since under the title of "Statistics on Mineral Activities of Iran". The first census of mines of the country was carried out in the month of Azar in the year 1342 by the Ministry of Economy. Statistical Bureau of the Ministry of Economy gathered and published statistics on mines-related activities annually from the year 1342 to the year 1353, using statistics from nationwide mines registers and records. The second census of mines of the country was conducted by the cooperation of the SCI and the Ministry of Industry, Mine and Trade in the year 1353. The SCI used to conduct a survey of a selected number of mines annually from the year 1353 to the year 1357. This part of economic activities suffered from the lack of statistics during the year 1357 to the year 1363, because in the interim, neither were statistical surveys implemented nor were comprehensive registers made available. The SCI conducted a survey of mines, run by the public sector in the years 1364 and 1365, and also carried out the third census of mines of the country in the year 1366. Survey of mines has been conducted every year from the year 1367 to the year 1395 except for the years' 1370 and 1384.

The data presented in this chapter are from the aforementioned censuses and surveys as well as data from the mineral cooperatives companies reported by the Ministry of Cooperatives, Labor and Social Welfare .

On the statistics presented, it should be noted that:

- (1) In the survey of the operating mines of the country, statistics on oil and gas, radioactive materials, and clay were not collected. However, due to the special importance of oil and gas statistics, the related information is separately presented in chapter 7(Oil and gas).
- (2) In the survey of operating mines, sand and gravel mines are enumerated by a sample survey, and other mines by a census.
- (3) The ISIC Rev.5 is followed with appropriate modifications for the classification of activities in this sector.

Definitions and concepts

Mine: Refers an area which contains mineral deposit.

Ore dressing: Refers to all physical and chemical operations for separating some of waste materials from ores or separating ores from one another.

Operating mine: Every mine in which some operations are done for extraction, dressing activities or producing marketable ores.

Private management: Management exercised by individuals or private institutions.

Public management: management exercised by the ministries, government organizations, Islamic Revolution Foundations, banks, municipalities and other public institutions.

Workers: All the individuals working full-time or part-time in mine-related activities inside or outside of the mine. The employed persons are divided into two groups: production line workers (skilled and unskilled) and other workers (administrative, financial and service) according to their duties.

Production line skilled workers: Employed persons capable of performing a part of technical activities related to production line due to their know-how and experience. Engineers, technicians, craftsmen, foremen, skilled laborers, fitters, and drivers, are some examples.

Production line unskilled workers: Persons working in production line whose jobs do not require any specific training or experience; such as laborers and porters.

Other works (administrative, financial and service): Employed persons engaged in clerical, administrative, financial and services activities in mines or their central offices but not engaged directly in extraction and production activities.

In presentation of statistics on employed persons, it is noteworthy that the method of "average number of employed persons" has been employed in the calculation.

Compensation of employees: See "Chapter 5, Definitions and concepts".

Mineral production: All minerals obtained from a series of extraction activities which make them marketable. It should be mentioned that in some mining activities, minerals are supplied to the market without undergoing dressing process, whereas in others, minerals are supplied to the market after a series of physical and/or chemical treatments for separating some of the waste from ores, separating ores from one another, or increasing fineness of raw material. In addition, in one mining activities, several minerals may be produced. For example, copper ore mining activity includes minerals of copper ore and copper and molybdenum concentrates production.

Value of products: Value of extracted ores, value of processed minerals at the mine and saleable mineral waste products at producer prices at the mine.

Investment (changes in the value of capital properties): See Chapter 5, Definitions and concepts.

Value added: Value of receipts (outputs) less the value of payments (inputs).

Value of receipts (outputs): Value received for the producing and non-producing services.

Value of payments (inputs): Value paid for the services.

Cooperative: See Chapter 5, Definitions and concepts.

Mines cooperative: A cooperative company engaged in excavation, exploitation, and sales of minerals obtained from operating mines

Selected information

According to the results of national operating mines survey in the year 1395, there were a number of 4913 operating mines. The results show that a total of 93486 workers were working in these mines and the number of workers increased by 2.5 percent compared to the year 1394.

In the year 1395, the value of mines products amounted to 165734101 million rials. Iron ore, copper ore and decorative stones with 77607538, 40355435 and 9825809 million rials accounted for highest annual production value, respectively. In the year 1395, the value added of the nation's operating mine amounted to 123275908 million rials. Iron ore, copper ore, and decorative stones with 53151619, 32524226 and 8124733 million rials had the highest value added, respectively. Total value-added of these mines accounted for more than 76% of the sector's total value added. Moreover, Kerman, Yazd and East Azarbayejan with 55308212, 16488886 and 10974733 million rials had the highest value added of the nation's operating mines among the Ostans.

In the year 1395, an amount of 20368200 million Rials of new investment was made, of which 71% related to machinery, durable tools and office equipment, 13% to the construction and installations, 2% to development and exploration, and 2% to private roads.
