

Introduction

Environment is a set of physical and biological factors along with their interactions that affect the behaviors and growth of organisms. Thus, the environment is beyond the set of natural, biological, and non-biological factors and also includes the interaction between humans and nature. By considering the fact that in the 21st century, environmental protection is one of the Millennium Development Goals (MDGs) and one of the three principles of sustainable development (environmental sustainability, economic sustainability, and social sustainability) and due to its increasing importance and impacts on other socio-economic activities, a separate chapter on "Environment Statistics" was dedicated to this issue in the Iran Statistical Yearbook since the year 1392. The natural environment is affected by human activities in different forms. These impacts on the three constituting factors of the environment are as follows:

Water

The most important impacts of human activities on the water are summarized in three ways: water overuse, depletion of water resources, and pollution of surface and underground waters.

The quality of water is another challenge countries face. The pollution amount of some waters and its progressive trend is worrying. The groundwaters, lakes, and springs are the main resources of freshwaters that are directly subject to pollution through human activities.

Soil

The most important impacts of human activities on soil are: soil poisoning and erosion which lead to destruction and decrease of arable lands capacity; overall, soil erosion is a natural process that occurs

by wind or water flows, and temperature changes. However, human activities such as intense farming, irrigation of farmlands, monocropping, overgrazing, deforestation, and desertification lead to an imbalance between soil formation and its degradation processes, and finally soil pollution.

Air

Air pollution is the direct or indirect introduction of every material by humans, possibly causing undesirable impacts on human health and the environment.

The information presented in this chapter includes statistics of natural resources; national heritage, forests, ranges, and deserts; the amount of distributed fertilizers; sold pesticides; emission of pollutants; activities of urban and industrial sewage; and the environmental specifications of health and medical centres.

The statistics on natural resources protected by the Iran Department of Environment included in the Chapter "Land and Climate" from the year 1368 to the year 1390 and the statistics on forests, ranges, and deserts and the statistics on the amount of distributed fertilizers; and sold pesticides which were presented in the Chapter "Agriculture, Forestry, and Fisheries" of the Iran Statistical Yearbook, are presented in the Environment Chapter due to its closer relationship with the environment sector since the year 1392. This Chapter also contains the statistics of emission of pollutants and greenhouse gases resulted from the burning of different types of fuels, which have been published in the Energy Balance Sheet of the Ministry of Energy since the year 1377.

This Chapter also includes the statistics produced by the "National Water and Wastewater

Engineering Corporation", "the Ministry of Industry, Mine and Trade" and the "Ministry of Health, Treatment, and Medical Education."

Definitions and Concepts

National parks: an area of the nation's natural resources such as jungles, pastures, natural coppices, woodlands, plains, water and mountainous regions which presents distinguished samples of Iran's natural manifestations and is protected in order to provide sustainable preservation of its natural and diverse conditions and create a suitable environment for reproduction, and breeding of wildlife and growth of plants in a completely natural condition.

Wildlife habitats: an area of the nation's natural resources such as jungles, pastures, natural coppices, woodlands, plains, water and mountainous regions which has typical natural habitats, and special ecological conditions for wildlife and is protected in order to preserve or rehabilitate these protected habitats.

Nature reserves: protected areas of the country's nature, including jungles, pastures, plains, or mountainous regions which are important for preserving and reproduction of wild animals or rehabilitation of plantations or natural conditions.

National natural heritages: specific and rare species of plants or animal and unique picturesque settings or views, specific natural forms of the earth as well as very old trees that are protected in an appropriate area.

Greenhouse gases: The vapor of H₂O, CO₂, NO₂, CH₄, O₃, HFCs, and PFCs are called greenhouse gases.

Range: a land, be it a mountain, mountainside, or a plain, which is covered with herbaceous forage crops in grazing season and already grazed, is commonly known as the range. Fallows, even though covered with herbaceous forage crops, are not included in this category.

Log: a portion of the trunk of a fallen tree, almost cylindrical, used to produce types of wood or veneer.

Sawn wood: articles of wood in specific sizes (length, width, and height).

Pole: wood from the trunk of a tree the chest-high diameter of which is between 8 and 30 centimetres.

Pitprop: rounded piece of wood, almost two metres long, with a median diameter of 6 to 20 centimetres and used in mines.

Timber: round wood 1.5 to 2.0 metres in length and 20-40 centimetres in diameter that cannot be turned into sawn wood.

Pulpwood: wastes of articles of wood in different sizes and lengths.

Mulching: is a practice for covering soil to prevent it from erosion, keep its temperature, and retain its moisture.

Living windbreak: a line of trees, shrubs, or other vegetation planted across the usual wind direction to break the force of the wind and lower its speed, causing the sand and other materials carried by the wind to be deposited behind it in an order of size.

Artificial windbreak: rows of artificial obstacles (like fence, wall, dead branches, etc.) constructed across the usual wind direction to break the force of the wind and lower its speed, causing the sand and other materials carried by the wind to be deposited behind it in an order of size.

Preservation: selection and declaration of the areas of regions with high erosion or sensitive to erosion.

Forest the land which is covered with natural green coverage or planted trees and shrubs and its main economic product is wood. The tree nurseries are not considered as a forest. Plastic bag seedlings and nurseries created for the purpose of forest protection and development of forests are considered as a forest.

Sewage extension: refers to the part of minor sewage pipelines, including pipes and related accessories, with a profile appropriate to siphon or contractual capacity, which carries joint sewages away from the siphon to the private line or to the public network for collecting sewages.

Customer of sewage and water: A customer who has a contract with a sewage and water supplier for a determined time period and his/her needed extension(s) is/are installed.

Water and sewage extension for household use:

This kind of extension is installed in the residential units for conventional consumption of drinking water or disposal of household sewage (a place recognized by the Water and Sewage Company, a residential unit is defined as a place for living which has at least one room, a kitchen, a toilet, and has independent entrance or has an entrance leading to a common hallway).

Public network for collection and transmission of sewage: refers to all installations and equipment, such as main collectors, used for collection and transmission of sewage to water treatment house, and pump houses of urban sewage and public side networks, all belonging to the Water and Sewage Company. The network is not responsible for the collection, transmission, and disposal of rainfall water flowing on passages, flood channels and channels inside and outside cities and located in the customers' estates.

Sewage services: providing the services such as sewage removal and disposal to the public network for collection and transmission of sewage based on water consumption, and capacity and specifications determined and agreed in the contract related to the network installation whether the customer makes use of this capacity or not.

Treatment and removal of sewage: refers to all the operations related to the use of installation and the equipment related to wastewater removal and treatment such as wastewater treatment plants, pumping stations, and different types of chlorination installations, channels, and wastewater transmission lines.

Selected information

In the year 1397, the area of zones protected by the Iran Department of Environment was about 17764531 hectares, of which the Ostans of Kerman with 2405944 hectares and Qom with 34177 hectares had the highest and lowest areas respectively. In this year a number of 1312 conflagrations happened in the forests and ranges which shows a decrease of 26.3 percent in comparison with the previous year.

In the year 1396, among the pollutant and greenhouse gases resulting from the burning of fuels in the transportation sector, CO₂ with 144705234 tons had the greatest portion; namely 92.2% of the total pollutant and greenhouse gases emitted in this sector. It should be cited that the greatest portion of CO₂ production is related to the burning of gasoline and the lowest one goes to the liquefied gas.

In the year 1397, about 51 percent of the population of the country was under the coverage of the network for collection and transmission services of urban sewage which shows a 2 percent rise compared to the previous year. The highest share of the population under the coverage of this network belongs to the Ostan of Kordestan with 96 percent and the lowest share of the population under the coverage of this network is for the Ostan of Kerman with 13 percent.

In the year 1397, the average volume of collected wastewater was 6039958 cu m which shows a 23.5 percent rise compared to the year 1396. The Ostans of Tehran and Khuzestan with 34 percent and 9.2 percent had the most collected wastewater volume and the Ostans of Semnan and South Khorasan with 0.2 percent and 0.3 percent of total nation's wastewater had the lowest volumes, respectively.

1. National plan of "Range management and Balance of Livestock and Range", was renamed "Sustainable Management of National Rangelands" in the year 1384, of which the name of some projects changed accordingly, too
 2. Since the year 1384, the plan of "Improvement and Reformation of Rangelands" has been provincialized and since the year 1386 its projects have been conducted in the form of "Improvement and Rehabilitation of Rangelands".

1. In the year 1392, kerosene delivered to the Ministry of Energy was mixed with gas oil to be consumed in power plants. Due to the unavailability of the emission coefficient of the kerosene consumed in power plants, the emission amount of the pollutants of this energy carrier was not considered in the calculations.

2. Used as part of fuel in the Esfahan Steel Company.

Hamedan	9	0	2
Yazd	4	0	3

1. Statistics in the tables for different years are cumulative.

2. Revised figures.

3. The decrease in the number of sewage treatment plants in industrial towns and regions is due to some operated treatment plants that were under construction in previous years, but are in operation now.
