

### *Introduction*

**B**elow you will find a short history of the examination of prices and calculation of the related indices for urban and rural areas by both the Central Bank of the Islamic Republic of Iran and the Statistical Centre of Iran (SCI).

#### *A. Consumer price index for goods and services in urban areas*

The National Bank of Iran first calculated the cost of living index in urban areas and the wholesale price index for goods in the year 1315. In the year 1338, the calculation of the cost of living index and the wholesale price index for goods was revised due to the change in the base year. With the establishment of the Central Bank of Iran in the year 1339, the responsibility for calculating such indices was shifted to this Bank. With respect to remarkable changes in households' consumption patterns and expenditure composition, the Central Bank of Iran took the year 1348 as the base and made the second revision in the calculation of the cost of living index and the wholesale price index for goods. The year 1353 witnessed some changes in national economic conditions, which caused it to be selected as the new base year, and the indices calculation underwent the third revision. Considering the changes that happened in the household consumption pattern resulting from socio-economic developments after the 1357 Islamic Revolution, the year 1361 was adopted as the base and the indices calculation was revised again. In the year 1369, after the end of the Iran-Iraq War, which caused changes in economic conditions, revision in the base year was considered necessary and the Central Bank of Iran adopted the year 1369 as the new base for the calculation.

In the year 1378, the Central Bank of Iran changed the base year from the year 1369 to the year 1376 for the calculation of the price index of consumer

goods and services in urban areas. Moreover, since the year 1385, this index was calculated and disseminated on the basis of the base year 1383. It should be mentioned that the Statistical Centre of Iran started to calculate this index from the year 1381 and it was decided that from the year 1390, the information on this index be included in the Statistical Yearbook of Iran according to the base year 1381. It is noteworthy that the Statistical Centre of Iran calculated this index based on the base year 1395 and included it in the Statistical Yearbook of Iran.

#### *B. Consumer price index for goods and services of rural households*

The SCI conducted the retail price survey of certain consumer goods and services in rural areas for the first time in the year 1353. The results of the survey used to be published in the form of the average prices of consumer goods and services in rural areas as quarterly and annual reports until mid of the year 1357. The results of the survey for the second half of the year 1358 and the first half of the year 1359 were released as average prices and consumer price indices for rural households. Consumer price indices for goods and services for rural households were calculated and released from the year 1361 to the year 1375 with the year 1361 as the base. Moreover, the year 1374 was adopted as the base year in the year 1376, and the statistics for the years 1375 to 1383 were prepared and disseminated by Ostans and the total country. From the year 1383 to the year 1391, the base year was the year 1381. At present, according to the latest revisions, the year 1395 has been adopted as the base for calculation.

#### *C. Producer price index*

The Central Bank of the Islamic Republic of Iran started the calculation of the producer price index in the year 1369. The most important uses of the index are the early presentation of inflation trends and its application in national accounts for adjusting current prices into constant prices. It is

noteworthy that the Statistical Centre of Iran calculated this index based on the base year 1395 and included it in the Statistical Yearbook of Iran.

#### **D. Price index for goods exported**

In the system of price statistics, the price indices for exported and imported goods are used for different reasons. The price index for goods exported shows the price changes in exported goods and the price index for goods imported shows the price changes in goods supplied in the country for a specific period of time.

The calculation of "the price index for exported commodities" started in the year 1376.

Figures relating to the price index for exported and imported goods in the previous years were based on information obtained from the wholesalers involved in exports and imports. It is noteworthy that the Statistical Centre of Iran calculated this index based on the base year 1395 and included it in the Statistical Yearbook of Iran.

#### **Definitions and concepts**

**Consumer price index (CPI):** It refers to a measure of changes in prices of a certain fixed number of goods and services consumed by households over the base year.

**Base year:** This is a certain fixed year in which the percentage changes in the indices is compared. The index for the base year is equal to 100.

**Weight:** It refers to the contribution of any single good or service to the set of goods and services subject to the indices is called "weight". In consumer price indexes for goods and services, the contribution of any single good or service equals a proportion of expenditure spent by a household to the total household expenditure. In the wholesale price index, the contribution of any single good is equal to the selling value of wholesale of goods to the total value of wholesale of goods. In the producer price index, the contribution of any single good or service is equal to the proportion of the production value or selling value of a single good or service to the production or selling value of the set of goods and services.

#### **Classification of groups for goods and services:**

This classification of goods and services in price indices and services is made according to their intrinsic nature and international classifications as well as national requirements. However, the overall bases of classifications are those recommended by the United Nations (i.e., the COICOP<sup>(1)</sup> for goods and services, the SITC<sup>(2)</sup> for wholesale trade, and ISIC<sup>(3)</sup> Rev. 3 for producers) and modified with respect to the considerations of Iran's economy. In these classifications, goods and services are divided into a number of large groups, each of which consists of several sub-groups. Moreover, groups of goods and services are also classified according to special groups in terms of requirements.

#### **Durable, semi-durable and non-durable goods:**

They refer to the goods that are a weighted average of durable, semi-durable and non-durable goods. The distinction between non-durable and durable goods is based on whether the goods can be used only once, or repeatedly or continuously over a period of considerably more than one year. Moreover, durables, such as motor cars, refrigerators, washing machines and television sets, have a relatively high purchasers' price. Semi-durable goods differ from durable goods in that their expected lifetime of use, though more than one year, is often significantly shorter and their purchase prices are substantially less, and the number of purchase frequencies is more over the year. Other goods are considered non-durable.

**Fresh foods and other foods:** Fresh foods refer to the foods that are bought more than once in a month and experience more price fluctuation than other foods. Accordingly, their prices are asked three times in a month (the prices of other foods are asked twice a month). This group includes red and white meat, dairies, fresh fruits and vegetables.

**Goods and public services:** They refer to the goods and services of which prices policies and supply are formulated and developed by the

1. Classification of Individual Consumption According to Purpose.

2. Standard International Trade Classification.

3. International Standard Industrial Classification.

government or public sector such as energy carriers, state medical and educational services, the cost of fixed telephone calls,...

**Urban areas:** see Chapter 3," Population" Definitions and concepts.

**Rural areas:** see Chapter 3," Population" Definitions and concepts.

**Producer price index (PPI):** PPI shows the trend of changes in prices of produced goods and services (whether they have left the production line or are used during the production trend). In other words, this index is the measurement of the changes in prices received by domestic producers for their products or changes in prices paid by this producer for their intermediate inputs.

**Price index for exported commodities:** measures changes in exported goods prices. Exported commodities include all commodities which are completely produced inside the country and exported as semi-finished goods or raw material.

#### *Selected information*

Consumer price indices for goods and services for national households with an increase of 36.4 percent in the year 1399 stood at 252.6 (base year=1395) compared with the previous year. National household consumer price indices for two special groups, "goods" and "services" increased by 43.5% and 26.4%, respectively, compared to the year 1398. In the group for "food, beverages," the price indices for "spices and seasonings" with 17.4% had the lowest changes while the price indices for "fruits and nuts" with 50.2% had the highest change compared to the year 1398. In this group, the "tobacco" group experienced a 36.6% rise in comparison with the previous year.

In the group of non-food goods and services, this index for "transportation" group with a 65.6% increase had the highest change and the "housing, water, electricity, gas and other fuels" group with a 9.7% increase had the lowest change.

In the year 1399, the highest and lowest general index was for the Ostans of Ilam and Qom with 286.6 and 233.1 percent, respectively.

In the year 1399, urban household consumer price indices with an increase of 36.2 percent stood at 250.6 in comparison with the last year (base year=1395). Urban household consumer price indices

for two special groups, "goods" and "services" increased by 44.0% and 26.5%, respectively, compared with the year 1398.

Consumer price indices in goods and services for rural households in the year 1399 increased by 37.7 percent, compared to the previous year, and stood at 263.5 (base year=1395).

Consumer price indices of rural households for goods and services for two special groups "goods" and "services" increased by 41.8 and 25.0 percent, compared to the year 1398, respectively.

In the group "food and beverages", the highest and the lowest increase relate to the group, "vegetables, pulses and vegetable products" group with a 57.3% and "spices and seasonings" with a 16.4% rise, respectively.

Moreover, the group "tobacco" experienced a 30.0 percent rise in comparison with the previous year. In the group "non-food goods and services", the highest increase relates to the group "transportation" with an increase of 58.2% and the lowest increase belongs to the group "water, electricity, gas and other fuels" with a 10.0 percent increase in comparison with the previous year.

The national producer price index for the year 1399 increased by 46.7 percent compared to the year 1398 and stood at 316.2 (base year= 1395). Producer price index in "Mining and quarrying" with an increase of 79.8% compared to the previous year, had the highest increase and also in "agriculture" with a 36.5 percentage change compared with the previous year, had the lowest change.

The general price index for exported goods in the year 1399 increased by 172.2 percent and stood at 1075.0 (base year= 1395) compared to the year 1398. In this index, the highest increase relates to the groups "electrical appliances, components etc." with a 619.4% rise and the "plastic materials and manufactured objects" group with a 61.1 percent rise had the lowest change in comparison with the previous year.
